Dear Dr. [REDACTED]

Thank you for your article. My son is 29 yrs old and has just suffered a massive stroke after ingesting a dose of "Ultimate Orange", an OTC supplement containing ma huang. He is currently in intensive care at [REDACTED]
[REDACTED]

He is just 29, but has been in the military since age 19. He was attached to the [REDACTED] and was in perfect health. He was out of the Army to complete his college and was due to graduate in May of 1999. He has already received his letter of acceptance from the Army as a 2nd Lt., and was scheduled to attend officer training school.

At the time of the stroke, he had been running on a treadmill for 15 minutes, felt a sharp pain to his head and passed out. The prognosis is not very good at this time and due to the severe brain damage and dead brain cells he may never walk again and will certainly not be able to follow his dream of a career in the military.

I am looking for some direction to get the word out to the media and to the public about the effects of this drug. Any help you could provide would be greatly appreciated.

My email is [REDACTED]

My office number is [REDACTED] and my fax is [REDACTED]

Thank you,

[REDACTED]

FILE COPY

[REDACTED]

Dear Mr. [REDACTED]

This is a follow up to our telephone conversation, earlier today.

My son, [REDACTED] is 29 years of age. On December 29, 1998 while running on a treadmill at a local fitness club, he felt a sharp pain above his right eye and then passed out. He was transported to [REDACTED] He later came to, but was paralyzed on his left side. A few hours later, he regained the feeling on his left side, leading the doctors to believe that for some reason, the main artery feeding the right side of his brain had become constricted, stopping the flow of blood. But, the problem had reversed and he was finally getting blood flow through the artery. They scheduled an MRI for the next day at 1:00 p.m.

The next day, he seemed fine, walking, talking, eating and ready to get out of the hospital. However, prior to the MRI, he suffered a massive stroke to the right side of his brain, again leaving him paralyzed on the left side. The MRI was completed, verifying that he had, in fact, had a massive stroke, resulting in the death of the majority of the right side of his brain.

He was immediately transferred by ambulance to [REDACTED] in [REDACTED] for further treatment. While at [REDACTED] the brain began to swell and as a result, he would undergo three major brain surgeries over the next four days.

He was in a coma, contracted pneumonia, was unable to eat or speak much of the time.

According to the doctors, my son had almost died several times during the ordeal.

After removing the majority of my son's right brain area, they were finally able to get the swelling under control. They then had to do a fourth brain surgery to put in a shunt, to drain the excess brain fluid to the stomach.

000003

My son was finally transferred from the ICU to the [REDACTED] floor of the hospital and is currently in Room [REDACTED] of [REDACTED] waiting for a transfer to a rehabilitation hospital.

EXHIBIT #:
DATE: 2-12-99
INVESTIGATOR: [REDACTED]

His current condition is not very good. He is still paralyzed on the left side, he has not been able to get out of bed since December 30, 1998, and he has to have someone feed him. Due to the paralysis he has trouble talking and swallowing. Due to the brain injury he has trouble staying awake and is also confused. He can not get out of bed, so he must wear a "diaper" and is forced to use the bathroom in his pants and then wait for someone to change him. This is a 29 year old man!

Prior to the injury, he had been attending [REDACTED] as a full time student in an Army program called, [REDACTED]. This is a program where an enlisted man receives a special release from his current enlistment contract in order to complete his education, while being enrolled in the ROTC program. The enlisted man is then accepted back into the Army as an Officer. His most recent enlistment was to be completed in the year 2002. According to the ROTC, if my son had not finished his obligation of completing his education, then it would have been mandatory for him to complete his enlistment in the Army and then be eligible for discharge in the year 2002.

My son was scheduled to graduate from [REDACTED] in May of this year, and had already had a letter from the Army confirming his acceptance as an Officer. According to the ROTC, the Army will not provide my son with any benefits and will simply "forget" about their contract with him. The ROTC, at [REDACTED] is being very helpful and is willing to do anything they can to see that my son does receive the benefits to which he should be entitled. They are pushing this case through the Army channels and requesting an exception to the ruling. They are all comrades of my son's and will do anything necessary to help him and his family. My son is married to [REDACTED] and they have a four-year-old son, [REDACTED].

My son joined the Army, just after graduating from high school and had decided to make the Army his career. At the time of his "conditional discharge" to complete the [REDACTED] program, he had attained the rank of [REDACTED] or [REDACTED]. He was in the [REDACTED], and has received two [REDACTED] one for [REDACTED] and another for [REDACTED]. At the time of his injury he was ranked in the top 5% of military personnel in the Army ROTC.

He had a great and rewarding future ahead of him. The Army and the United States have lost a great asset and someone that would have been a great officer. It is unthinkable that after dedicating himself to the U.S. Army, that they would just throw him away when it was not convenient for the Army.

000004

In order to stay fit for the Army, my son was taking a legal supplement - "Ultimate Orange" (I have attached an information sheet on the product for your review). The product had been purchased on the Army Post, at [REDACTED]. The main ingredient is "Ephedrine" also known as "My Huang". The attending doctor at [REDACTED]

documented that this supplement was probably the cause of the stroke. I have attached several articles about Ephedrine and My Huang, but basically it is just old-fashioned "SPEED"!!

While the doctors at [REDACTED] would not say the cause of the stroke was Ephedrine, they did state that they had ruled out all other "normal" causes that were seen in 85% of the cases of strokes. I have also spoken to several doctors and they all seem to be aware of the drug Ephedrine and the harm that it causes, I feel they would be available to provide letters or verbal testimony as to the harmfulness of the drug. Ephedrine is a "vaso constrictor", and it is my opinion that the main blood vessel to my son's brain had completely clamped shut, causing the first stroke. As the blood vessel was shut down for several hours, the blood clot started to form, later in the day the blood started to flow again, allowing my son to regain use of his left side. However, the next morning, the blood clot broke loose, travelling through the artery and becoming clogged at a vessel junction, thus causing the massive stroke from which my son now suffers.

I want to be able to accomplish the following:

- Put people on notice about the dangers of the drug Ephedrine,
- Have the United States Army do what is right and provide benefits to one of their soldiers, and
- Obtain a large settlement from the makers of "Ultimate Orange", so that my son and his family will be able to survive the rocky and treacherous road ahead.

My son's family does not have any money to pay attorney's fees and without him working, they are worried about losing their home and car. My son was working part-time at [REDACTED] in [REDACTED]

My son will need to find an attorney that can see the merits of this case and would be willing to take the case on a contingency fee. My friend, [REDACTED] suggested that you might be just the attorney that could make things right.

Thank you for your time and understanding.

Sincerely,

[REDACTED]
[REDACTED] (work)
[REDACTED] (home)

Next Nutrition Ultimate Orange

1 lb. / 16 servings container

Contains a proprietary blend of nutrients and herbs for workout energy.

ULTIMATE ORANGE

Considered by some athletes to be the most powerful workout drink ever developed.

One serving of ULTIMATE ORANGE and you'll feel the difference. It's like no other drink available today. ULTIMATE ORANGE contains a proprietary blend of nutrients and herbs for hard working muscles. It is the perfect drink to use before and during workouts when you need maximum energy.

When to drink ULTIMATE ORANGE

Before exercise - Drink one serving for body weight 30 - 45 minutes prior to exercise. During exercise - Take sips between reps or sets or every 15 - 20 minutes throughout workout. Avoid gulps all at once. For extra energy - Drink one serving for body weight 30 minutes before you feel tired.

How much ULTIMATE ORANGE should you drink?

Follow the table below as a guideline of usage amounts versus body weight. Each person has a unique metabolism that may require a slightly smaller or larger serving size for preferred effects.

Bodyweight LBS	132	154	176	198	220	Bodyweight KG	60	70	80	90
100 Number of Scoops	1/2	1 1/2	3/4	1	1-1 1/2	1 1/2	1	1 1/2	1	1 1/2

MIXING INSTRUCTIONS

Place 1 level scoop in glass, add 8 fl.oz./1 cup water, stir and drink. ULTIMATE ORANGE mixes quickly with a few stirs of a spoon. There is no need for a blender. To fill 16 fl.oz. water bottle - place 2 scoops in water bottle, half fill with water, shake vigorously, and then fill to top with water.

EIR

Firm Name: [REDACTED] Complaint # [REDACTED]

Date: February 12, 1999

Location: [REDACTED]

Inv. Name: [REDACTED]

City, State, Zip: [REDACTED]

This was a complaint/injury interview of Mr. [REDACTED] Complainant, regarding complaint # [REDACTED] (attachment # [REDACTED] by [REDACTED] Drug Investigator for the [REDACTED]. On February 7, 1999, [REDACTED] received an e-mail from Mr. [REDACTED] that stated he would like to obtain a copy of the proposed ephedrine rules and to be scheduled as a speaker before the board [REDACTED] on February 25, 1999, regarding the proposed ephedrine rules. Mr. [REDACTED] also stated that his 29 year old son, [REDACTED], had suffered a massive stroke after taking "Ultimate Orange", an ephedrine containing product.

SUMMARY OF FINDINGS:

On February 8, 1999, I received a copy of Mr. [REDACTED] e-mail and was assigned to interview Mr. [REDACTED] to obtain further information regarding his son's injury and the Ultimate Orange product.

On February 12, 1999, I met with Mr. [REDACTED] his place of business [REDACTED]

Mr. [REDACTED] began by stating that his son, [REDACTED] was 29 years of age, married to Mrs. [REDACTED] and that they had a five year old son, [REDACTED]. Mr. [REDACTED] stated that prior to the injury [REDACTED] had been attending the [REDACTED] as a full time student in an Army program called [REDACTED]. This is a program where an enlisted soldier receives a special release from this current enlistment contract in order to complete his education, while being enrolled in the ROTC program. The enlisted man is then accepted back in the Army as an Officer after his school is completed. [REDACTED] was scheduled to graduate from [REDACTED] in May of this year, and had already received a letter from the Army confirming his acceptance as an Officer.

In order to stay fit for the Army, [REDACTED] was taking a supplement called Ultimate Orange, which contained 415mg of ephedra (listed as Ma Huang). [REDACTED] had purchased the product at the Army post [REDACTED] (on-base grocery store) at [REDACTED]. [REDACTED] provided me with information (exhibit # [REDACTED]) he obtained off the Internet about the Ultimate Orange product (manufactured by Next Nutrition, Inc.). The promotional product information states that it is for "...workout energy" and that it is "considered by some athletes to be the most powerful workout drink ever developed." Mr. [REDACTED] also provided me with corporate information regarding Next Nutrition, Inc., (the manufacturer of Ultimate Orange) (exhibit # [REDACTED]).

Also from the Internet, Mr. [REDACTED] provided me with his search results for Ultimate Orange which he obtained from the United States Food and Drug Administration (FDA) Special Nutritionals Adverse Event Monitoring System's reports (exhibit # [REDACTED]) and other information regarding ephedrine containing products (exhibit # [REDACTED]).

At approximately 10:00a.m. on December 29, 1998, [REDACTED] drank approximately 1½ cups of Ultimate Orange (with water). The product information contains mixing instructions that state to "place 1 level scoop in glass,

add 8 fl. oz./1 cup water, stir and drink." Mr. [REDACTED] stated that to his knowledge [REDACTED] was not taking any other medications at the time nor had he been ill in the past days or weeks. Mr. [REDACTED] did not know if [REDACTED] had drank the Ultimate Orange after eating breakfast or not. Mr. [REDACTED] stated that he did not have the original bottle that the Ultimate Orange came in and that he thought his daughter-in-law, [REDACTED] wife, had it.

Then, at approximately 1:45p.m., while running on a treadmill at a local fitness club, [REDACTED] felt a sharp pain above his right eye then lost consciousness a short time later. While unconscious he was transported to [REDACTED] later that day [REDACTED] regained consciousness, but was paralyzed on the complete left side of his body (from head to toe). Around 6:00p.m. [REDACTED] had regained the feeling on his left side. The doctors scheduled a Magnetic Resonance Imaging (MRI) test for the following day at 1:00p.m. as a precaution.

The next day (December 30, 1998), Mr. [REDACTED] stated that [REDACTED] appeared to be recovered. Mr. [REDACTED] stated that [REDACTED] was talking, eating, walking and ready to be released from the Hospital. However, prior to the MRI (at approximately 11:30a.m.) [REDACTED] suffered a massive stroke to the right side of his brain, again leaving him completely paralyzed on the left side of his body. The doctors completed the MRI and confirmed that [REDACTED] had suffered a massive stroke which resulted in the death of approximately 90 % of his right brain. Mr. [REDACTED] stated that [REDACTED] was immediately transferred by ambulance to [REDACTED], for further treatment.

While at [REDACTED] Hospital, the right side of [REDACTED] brain began to swell as a result of the stroke. Before the doctors performed the first of four brain surgeries on [REDACTED] to relieve the brain swelling and pressure, a feeding tube was placed into [REDACTED] stomach.

The first and second brain surgeries were performed to remove dead brain tissue and to relieve pressure surrounding the brain. After the second surgery [REDACTED] lapsed into a coma, contracted pneumonia, and was placed on a respirator. The doctors placed [REDACTED] on a high dosage of antibiotics to treat and cure the pneumonia.

The third surgery was performed to remove the remaining portions of the dead brain tissue. The doctors did not have a problem with brain pressure at this time since approximately 90 % of the right brain had been removed. After the third surgery, [REDACTED] became coherent and could respond to questions. [REDACTED] continued the antibiotics to ward off any other types of infections, in addition to the pneumonia.

The fourth surgery was performed to insert a shunt (a tube which was placed under the skin in the brain to redirect the flow of excessive brain fluid to the stomach).

Approximately on January 15, 1999, (a week after the fourth surgery), [REDACTED] was removed from the Intensive Care Department to the hospital's [REDACTED] floor to begin recovery and catch up on his sleep. The feeding tube remained in [REDACTED] stomach, along with the shunt. [REDACTED] was placed on an intravenous (IV) blood thinner. At this time, [REDACTED] had completely recovered from the pneumonia.

Around January 25, 1999, (approximately two weeks after the fourth surgery), [REDACTED] feeding tube and respirator were removed. [REDACTED] received an infection from the IV and was placed on stronger antibiotics.

On January 26, 1999, [REDACTED] was moved from [REDACTED] to [REDACTED] to begin his rehabilitation. [REDACTED] is still currently at the [REDACTED] of this interview, February 12, 1999.

Mr. [REDACTED] stated that the attending physician at [REDACTED] Hospital documented in [REDACTED] file that the Ultimate Orange was the probable cause of the stroke. Mr. [REDACTED] stated that while the physicians at [REDACTED] Hospital would not say the cause of the stroke was the Ultimate Orange, they did state that they had ruled out all other normal causes that are seen in 85 % of stroke cases. Mr. [REDACTED] stated that he had been discussing his son's condition with a Board Certified Acupuncturist named [REDACTED] ([REDACTED]). Mr. [REDACTED] stated that Mr. [REDACTED] had e-mailed him on information regarding Mu Huang (exhibit # [REDACTED]).

Mr. [REDACTED] stated that, in his opinion, the ephedrine constricted the flow of blood to his son's brain which caused the strokes. Mr. [REDACTED] stated that his son has taken the same dosage of Ultimate Orange in the past, with no troubles. Mr. [REDACTED] stated that his son has also consumed "Andro-6" without any side effects.

Mr. [REDACTED] provided me with copies of newspaper articles related to ephedrine (exhibit # [REDACTED]), his son's condition (exhibit # [REDACTED]) and a picture of his son in the [REDACTED] program (exhibit # [REDACTED]).

Mr. [REDACTED] stated that as of this interview (February 12, 1999) he had not obtained legal council; even though he had mailed a letter to Mr. [REDACTED] Attorney at Law, [REDACTED] discussing the case (exhibit # [REDACTED]).

I provided Mr. [REDACTED] with a copy of the proposed ephedrine rules. Mr. [REDACTED] stated that he would be at the February 25, 1999, [REDACTED] ephedrine public hearing [REDACTED].

I left Mr. [REDACTED] with two copies of the [REDACTED] Authorization for Medical Records Disclosure form and two copies of the FDA Authorization for Medical Records Disclosure form to give to Mrs. [REDACTED]. Mr. [REDACTED] stated that due to [REDACTED] condition, his wife was acting as legal guardian; therefore, she would be able to sign the forms. I provided Mr. [REDACTED] with Mrs. [REDACTED] phone number to contact when the forms had been signed. Mr. [REDACTED] did not have the names of [REDACTED]'s doctors at any of the hospitals.

Mrs. [REDACTED] obtained the forms from Mr. [REDACTED] and mailed them to me on February 25, 1999 (attachment #s [REDACTED] & [REDACTED]). I contacted all three medical hospitals to obtain a copy of [REDACTED] medical records on February 26, 1999. I was told by all three hospitals that they would also need a copy of the Power of Attorney (which gives [REDACTED] wife the power to act as his legal guardian). I called and left a message for Mr. [REDACTED] on February 26, 1999, at 8:00a.m., informing him that I would need a copy of this document and [REDACTED] social security number to obtain [REDACTED] medical records from the hospitals.

As of today, February 26, 1999, 11:30a.m., I had not received a return call from Mr. [REDACTED] regarding the Power of Attorney document.
